12 - 15 bags Burn Out Shock, diluted in a bucket of water or 15 - 20 bags Burn Out 35 broadcast over the pool
2 quarts Back Up Algaecide **Plus Top off Optimizer Plus (about 20 lb)**

All Dosages are based on a Normal, Clean Opening. Make Chemical Adjustments as Needed. Add greater amounts if the water is green or murky. Don't Skimp!

ALL POOLS:

- [] Remove All Leaves & Debris from Cover before Removing Cover
- [] Bring Water Level up to Normal operating level
- [] Vacuum pool of all dirt & debris
- [] Clean Liner with Off the Wall or Surface Cleaner
- [] Clean Filter with Kleen It or Strip Kwik Filter Cleaner
- [] Clean ladder treads and Winter Cover with Stow Away Cover Cleaner
- [] Allow opening chemicals to circulate for 24 - 36 hours
- [] Let water Filter 1 day before bringing in Opening water sample for Testing & Analysis
- [] Adjust pH, Total Alkalinity & Calcium Hardness as needed

NEVER DRAIN your pool. The liner will shrink, voiding the warranty and could cause damage to your pool. In gunite, plaster, or even fiberglass pools removal of the water from the pool could result in the pool structure "floating" and causing serious damage to the structure.
