

Maintaining Your Pool with Pristine Blue

Every 2 weeks:

- Test and adjust pH (7.2 to 7.6), Total Alkalinity (30 to 90 ppm), and Calcium Hardness (175 to 275 ppm) as necessary.
- Test Pristine Blue level. Top as needed according to the chart below.
- Shock with 1 (one) pound Pristine Power per 10,000 gallons of pool water to oxidize unfilterable swimmer waste such as suntan lotions, greases & oils. This considers light to moderate bather loads. Heavy loads or parties should consider shocking weekly.
- Add 2 oz. of Pristine Clean per 10,000 gallons of water.
- Add 2 oz. of Pristine Clear per 10,000 gallons of water.

Gallons of Pool Water

PB Level	10,000	12,000	14,000	16,000	18,000	20,000	25,000	30,000
0.1 ppm	17	20	24	27	31	34	43	51
0.2	15	18	21	24	27	30	37	45
0.3	13	15	18	21	23	25	32	38
0.4	11	13	15	17	19	21	27	32
0.5	8	10	12	14	15	17	21	25
0.6	6	7	9	11	11	13	16	19
0.7	4	5	6	6	7	8	10	13
0.8	2	2	3	3	4	4	5	6
0.9	0	0	0	0	0	0	0	0

Ounces of PristineBlue® to add

Every 3 to 4 weeks or monthly: Add 1 to 2 lbs. Pristine Extra per 10,000 gallons to thoroughly shock the pool

Important Note: DO NOT ADD PRISTINE BLUE MORE OFTEN THAN ONCE EVERY 2 WEEKS. Be sure to measure accurately with the measuring cup that came with your Pristine Blue start up kit. Overdosing with Pristine Blue may cause cloudiness or staining of pool surfaces.
